

Breazy

Breazy is the ideal cloth for short-term use, offering microfibre cleaning performance plus novolon® pick-up pockets.

Breazy outperforms any other semi-disposable cloth, plus it is very easy to calculate how many cloths you need per site and per month. Thanks to the competitive pricing, Breazy puts no stress on your budget.

Low infrastructure requirements

Breazy does not require washing. If there are no washing facilities around, just dispose of Breazy whenever necessary and start using a new one. You can either dispose of the cloth after a day's use or wash it and use it again up to 15 times.

Hygiene & Safety

With the colour coding system, a cleaning process according to hygiene standards and HACCP principles can be applied.

Material

The unique wave structure is a patented Freudenberg technology and the waves create pockets, which capture 40% more particle dirt than a comparable conventional cloth.

The fibre blend contains microfibre, which means easy and effective cleaning.

Material: 45% Viscose, 25% Polyester, 20% Polypropylene, 10% Polyester microfibre.

Usage

Breazy performs very well with both the bucket and spray cleaning methods. It can be used on all water-resistant surfaces such as desktops, cupboards, chairs, counters, bars, etc. Breazy is also highly suitable for all washroom surfaces.

Your benefits at one glance:

- ✓ Excellent value-for-money
- ✓ Breazy shows a bacteria, reduction of 99.9%
- ✓ Washable up to 10 times
- ✓ Patented wave structure for dirt pick-up
